

# DROPPED TOOLS? NOW, THERE'S NO EXCUSE...

Introducing the Tool@rrest™ Retr@ct 360: Retractable, Rotating Tool Lanyard

## UNIQUELY ENGINEERED TOOL LANYARD FOR FALL-ARREST HARNESSES AND TOOL BELTS

- Designed to hold hand tools up to 2.5kg in weight.
- Securely fastens to both fall-arrest harnesses and tool belts up to 3" wide.
- No screws or brackets required, allowing safe removal in moments if required.
- Anti-chafing back plate to protect belt and harness materials.
- Perfect for minimising entanglement and trailing lanyards for work at height.
- 360° rotating mechanism offers complete tool usability around the body.
- Intermittent auto-braking mechanism removes pressure on lanyard for ease of tool handling.
- One-click release mechanism retracts lanyard safely into protective housing.

## TECHNICAL DATA

- Length: 1.2m (fully extended). Weight: 400g.
- Certified for use with hand tools up to 2.5kg.
- Manufactured and tested in the UK.
- Karabiner options include spring-gate or stainless steel screw-gate for offshore/marine applications.
- Self cleaning re-wind brake and release mechanism.
- 260kg breaking strain SP30 cord.
- Durable PU coated texturised polyester cord.
- High-impact resistant polyamide casing.
- Anti abrasion coated metal backing plates.

✓ Secure Connection.

✓ 360° Rotation.

✓ 'One Click' Retract.

# OUR MISSION TO MAKE **WORK AT HEIGHT** SAFE...

Dropped tools cause serious or fatal injuries to innocent co-workers when working at height. For employers and clients, they also mean equipment damage, costly downtime, litigation, fines and loss of reputation.

'Self-tethering' (normally with rope, key rings or taped lanyards) is in itself is a major cause of incident as such solutions not industrially replicable or certifiable and have no mechanism for traceability or inspection. Until now, there has been no effective, certified and globally consistent method of tethering tools safely.

## HOW BIG IS THE PROBLEM?

- Dropped objects tend to be the 2nd most common cause of workplace death in developed economies.
- The likes of the HSE (Work at Height Regulation 2005) and Safe Work Australia / Regulation 54 now require the risk of dropped tools to be eliminated and not just managed.
- Backed by serious financial / legal consequences on an individual and corporate level... in short, it's time to ACT.

## OUR STORY

Tool@rest is a leading manufacturer of engineered, certificated solutions to prevent dropped tools in the global 'work at height' sector. Our systems centre around the creation of a patented tool tether:

- Independently tested, statistically fail-safe and fully certified.
- Uniquely capable of being retrofitted to nearly all new and existing hand tool stocks.
- For hand and power tools up to 2.5kg in weight.

Once tethered, a tool can now be securely attached to a lanyard which is anchored to an operative's tool belt or safety harness.

## ANY TOOL, TETHER IT WITH TOOL@RREST™

- Certified and statistically fail-safe.
- Durable, pliable, non-intrusive.
- Individually traceable and easily inspected.
- Compatible with new and tools already in use.
- Fits in minutes, on-site or through a global network of certified agents.
- Part of a complete Tool@rest™ system for safe working at height (lanyards, tethered tool kits, bags, buckets, belts, holsters and power tool Wr@ps).
- Exceeds any and all current industry standards.

Industry leading solutions for eliminating dropped tools when working at height... Can you afford not to?
